2-2. CONTROL OPERATION.....	3
2-3. COMMANDS	4

1. SPECIFICATIONS

■ Interface

Communication method... Serial interface, full duplex
Transfer rate 4800 BPS (bits per second)
Synchronization Start-stop (Asynchronous)
Bit construction 1 start bit, 8 character bits, 2 stop bits
Parity None
Signal format TTL level

■ Terminal Connections

Pin No.	Signal Name		I/O
1	GND	Signal ground	
2	TXD	Transmit data	Output
3	RXD	Receive data	Input
4	CTS	Transmit enable	Input
5	RTS	Receive enable	Output
6	NC	No connection	

GND: This is the signal ground terminal.

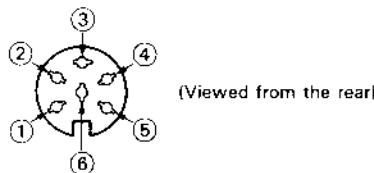

TXD: The transmit data is the serial data from the transceiver to the computer. The output utilizes negative logic.

RXD: The receive data is the serial data from the computer to the transceiver. The input utilizes negative logic.

CTS: This signal is supplied from the computer, and is used to inhibit transmit data from the transceiver when the computer is not ready to receive. The input utilizes positive logic. (Transmit data is stopped by a logic low.)

RTS: This signal is applied to the computer, and is used to inhibit transmit data from the computer when the transceiver is not ready to receive it. The output utilizes positive logic. (Inhibit is requested when the level is low.)

Connector pin configuration

2. OPERATION

Caution:

Turn the POWER switch OFF before making connections.

2-1. PRECAUTIONS FOR COMPUTER-CONNECTED OPERATION

When connecting the transceiver with a computer, check the following points.

1. Are the connections correct?

The transceiver output should be connected to the computer input and the transceiver input to the computer output.

Example:

Transceiver's transmission data — Computer's receive data

Transceiver's RTS — Computer's CTS

2. Is the computer's transmission rate 4800 BPS (bits per second)?

3. Is the computer's bit configuration correct?

1 start bit, 8 character bits, 2 stop bits, no parity.

2-2. CONTROL OPERATION

Most computers handle data in the form of "bits", and "bytes". A bit is the smallest piece of information that the computer can handle. A byte is composed of 8 bits. This is the most convenient form for most computer data. This data may be sent in the form of either serial or parallel data strings. The parallel mode is faster, but more complicated, while the serial form is slower it requires less complicated equipment, and therefore is less expensive.

Serial transmission of data occurs over a single line using time-division methods. This use of a single line also offers the advantage of reducing the number of errors due to line noise.

For control of the transceiver via the computer only three lines are theoretically required: transmit data (TXD), receive data (RXD), and ground (GND). From a practical standpoint it is also necessary to incorporate some means of controlling when this data transfer will occur. We don't want the computer and transceiver sending information at the same time! This is controlled by the RTS and the CTS lines.

The IF-232C is used in conjunction to provide voltage conversion. RS-232C deals in voltages above and below TTL levels, and must be converted to prevent damage to the transceiver. This interface/conversion is handled by the IF-232C.

The actual command sequence would be similar to those described below:

For example, the radio is placed into the transmit mode whenever the character string "TX" is sent from the computer. The character string "TX" is called a command. It tells the transceiver to do something. There are 37 different commands available for control of the transceiver. These commands may be incorporated into a computer program written in BASIC or any other high level language such as PASCAL, etc. Programming methods vary from computer to computer so please refer to the instruction manuals included with your terminal program, and computer.

2-3. COMMANDS

The illustration below demonstrates that a command is composed of two alphabetical characters, various parameters, and the terminator to signal the end of the command.

Example:

FA 00007000000 ; Command to set VFO A to
1 t 1 7 MHz.
Command Parameters Terminator

2-3-1. Command Description

A command may consist of either lower or upper case alphabetical characters.

2-3-2. Parameter Description

(Refer to the parameter list.)

Parameters are used to specify specific information necessary to implement the desired command. The exact number of parameters necessary for each command is predetermined. If a particular parameter is not applicable to the transceiver you are controlling the parameter digits should be filled using any character except the terminator ";".

For example the MC (Memory channel selector) command uses two parameters, 1 column to specify the memory bank number, and 2 columns to specify the memory channel number. To specify CH9 of memory bank number 1, the command would be:

"MC109;" The memory bank number is not necessary when programming the TS-950 so the command could be as given above "MC109" or as:
"MC_09;" In this case a blank has been used to fill the parameter block for the memory bank number.

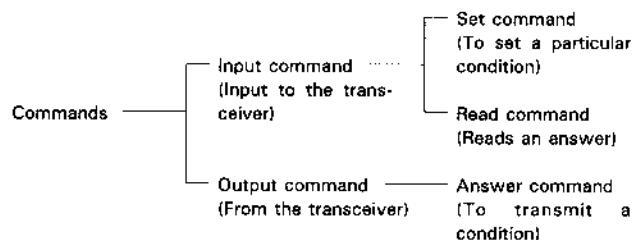

The following are examples of bad commands:

"MC09;" No memory bank specification (not enough parameters)
"MC19;" Not enough digits in the memory channel parameter, i.e. CH9 should be given as "09".
"MC_1_09;" Unnecessary characters between parameters.
"MC1009" No terminator

2-3-3. Terminator

To signal the end of a command it is necessary to use a special character. The character that has been selected for use is the semicolon ";". This special character must appear as the last character in a particular command string.

2-3-4. Types of Commands

Commands can be classified as shown in the chart above. For example, with the FA (Frequency of VFO A) command.

- To set the frequency at 7 MHz, the command sent from the computer to the transceiver is:
"FA00007000000;"(Set command)
- To read the frequency of VFO A, the command sent from the computer to the transceiver is:
"FA;"(Read command)
- When the read command, above, has been sent, the command returned to the computer is:
"FA00007000000;"(Answer command)

2-3-5. Error Messages

In addition to the answer command, the transceiver will send one of the following error messages:

?:	<ul style="list-style-type: none">○ When the command syntax is incorrect.○ When the command was not executed due to the current status of the transceiver, even though the command syntax was correct. <p>Note: _____ Occasionally this message may not appear due to microprocessor transients in the transceiver.</p>
E:	When a communication error occurs, such as an overrun error or framing error occurs during serial data transmissions.
O:	When the receive data is sent but processing cannot be completed.

2-3-6. How to read the command tables

Command	Name	The number of the command columns is shown.	Corresponds to the parameter of the command format.
AI	AUTO INFORMATION	1	Parameter Format P1 1 AI ON/OFF

TS-950S/950S DIGITAL	AUTO INFORMATION ON/OFF setting		
		Set command	
		Read command	
		Answer command	
		Output commands	
		Description	

AI AUTO INFORMATION

Applicable models: TS-950S/950S DIGITAL

Function: AUTO INFORMATION ON/OFF setting

Parameter: P1 1 AI ON/OFF

Format:

1	2	3	4	5	6	7	8	9	10	11	12	13
A	1	P1	;									
14	15	16	17	18	19	20	21	22	23	24	25	26

Function of the command

Format of the command: The format of the command is shown. When oblique lines are drawn in the 1st and 2nd columns there is no set command.

Format of the command for reading the sets condition: The format of the command for reading the sets condition is shown. When oblique lines are drawn in the 1st and 2nd columns, there is no read command.

Description: The format of the command output from the transceiver is shown. When oblique lines are drawn in the 1st and 2nd columns, there is no answer command.

Usage of command: (1) The "Auto Information" function checks the condition of the set once approximately every 1.5 seconds and when a change is detected automatically sends the IF command. (2) The check time is longer than 1.5 seconds during scanning or TUNING dial rotation.

2-3-7. Parameter list

Format No.	Name	Number of columns	Format	
1	SW	1	0=OFF	1=ON
2	MODE	1	1=LSB 2=USB 3=CW	4=FM 5=AM 6=FSK
3	FUNCTION	1	0=VFO A 1=VFO B	2=MEMORY
4	FREQUENCY	11	Represented in Hz, using 11 columns. Example: 00007000000 is 7 MHz 10 GHz 1 MHz 1 kHz 1 Hz	
5	RIT/XIT FREQUENCY	5	The first column is "+" or "-", and the remaining four columns indicate the frequency in Hz. Example: +5320 is +5.32 kHz	
6	-	-		
7	MEMORY CHANNEL	2	Represented in two columns. Example: 02 is CH2	
8	-	-		
9	MEMORY CHANNEL SPLIT SPECIFICATION	1	0=Receive	1=Transmit
10	MEMORY LOCKOUT	1	0=Not locked out	1=Locked out
11	TX/RX	1	0=Receive	1=Transmit
12	PASSBAND	2	Represented using two columns, from 00 to 21. "00" is the normal or wide position and "21" is the narrowest bandwidth.	
13	-	-		
14	TONE FREQUENCY	2	Represented using two columns, from 01 to 39.	
15	-	-		
16	MODEL NO.	3	Three column number specifying each set.	
17	-	-		
18	-	-		
19	-	-		
20	-	-		
21	-	-		
22	METER	4	0000 (MIN)→0030 (MAX)	
23	SUB SW	1	0=SUB: OFF, TF-W: OFF 1=SUB: ON, TF-W: OFF 2=SUB: ON, TF-W: ON	
24	METER SW	1	0=NO SELECT	3=ALC 1=SWR 2=COMP
25	PITCH	2	Represented using two columns, from 00 to 52. "00" is the low tone and "52" is the high tone.	
26	FILTER	3	000=NO SELECT 002=FM WIDE 003=FM NARROW 005=AM 007=SSB 008=SSB NARROW 009=CW 010=CW NARROW	

2-3-8. Command Use Precautions

1. The control characters (00 to 1FH) when included in receive data are ignored.
2. Program execution may be delayed during rapid encoder rotation.
3. Receive data is not processed when directly entering the frequency from the keyboard.
4. To enter the transmitter frequency for split frequency operations using the MW command, enter any number from 1 thru 6 as the mode and either a "0" or a "1" to indicate the memory channel lockout status.

Description																

[MR] MEMORY READ

Applicable models	TS-950S/950S DIGITAL													Parameter	Format	Parameter function
Function	Memory display													P1	9	SPLIT SPECIFICATION
Set command	1	2	3	4	5	6	7	8	9	10	11	12	13			
	14	15	16	17	18	19	20	21	22	23	24	25	26			
Input commands	1	2	3	4	5	6	7	8	9	10	11	12	13			
Read command	M	R	P1	—	P3	;								P2	—	
	14	15	16	17	18	19	20	21	22	23	24	25	26	P3	7	MEMORY CHANNEL
Output commands	M	R	P1	—	P3		P4							P4	4	FREQUENCY
Answer command	1	2	3	4	5	6	7	8	9	10	11	12	13			
	14	15	16	17	18	19	20	21	22	23	24	25	26	P5	2	MODE
	27	28	29	30	31	32	33	34	35	36	37	38	39	P6	10	MEMORY LOCKOUT
Description														P7	1	TONE ON/OFF
														P8	14	TONE FREQUENCY
All parameters are set to OFF when the memory channel is vacant. To recall the lowest operating frequency of the section use P1 = 0, and to recall the highest operating frequency use P1 = 1.														P9	—	

MW MEMORY WRITE

Applicable models		TS-950S/950S DIGITAL		Parameter	Format	Parameter function
Function	Memory entry			P1	9	SPLIT SPECIFICATION
Set command		1 2 3 4 5 6 7 8 9 10 11 12 13 M W P1 ; P3 P4 14 15 16 17 18 19 20 21 22 23 24 25 26		P2	—	
Input commands		1 2 3 4 5 6 7 8 9 10 11 12 13 P5 P6 P7 P8 ; ; 14 15 16 17 18 19 20 21 22 23 24 25 26		P3	7	MEMORY CHANNEL
Read command		1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25 26		P4	4	FREQUENCY
Output commands		1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25 26		P5	2	MODE
Answer command		1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25 26		P6	10	MEMORY LOCKOUT
Description	(1) The MW command is valid when all parameters have been correctly entered. (2) When all effective frequency columns are "0", the memory is set to an open channel. (3) When the split channel is open, the transceiver will be set for the same transmit and receive frequencies, i.e. simplex. (4) To recall the lowest operating frequency of the section use P1=0, and to recall the highest operating frequency use P1=1.			P7	1	TONE ON/OFF
				P8	14	TONE FREQUENCY
				P9	—
